

Reverse Lamp

The Reverse Lamp is a lightweight, rechargeable lamp providing both cool and warm light, depending on which end it is standing on.

With its modern design, this lamp is suitable for use both at home and when on the go. The built-in light dimmer can be controlled via touch-sensitive controls at both ends of the lamp. At one end there is a handle, useful for transportation and for hanging up the lamp wherever it is needed.

If it is laid horizontally it will provide an intermediate mix of the two-colour temperatures, providing optimal illumination for tasks such as reading, drawing or writing.

The lamp comes with a standard USB to micro USB cable for convenient recharging via a USB port on a socket, computer, tablet, or power bank.

FEATURES

- Built-in rechargeable battery (USB to micro USB cable supplied).
- 6 brightness settings.
- Provides up to 48 hours of light when fully charged.
- Built-in handle can be used to hang the lamp or carry the lamp around.
