Can't find what you are looking for? Please contact us as Optima can source many low vision products, including those from suppliers on the last page of this catalogue, at very competitive prices.

Unless otherwise indicated by *, magnification is defined using the formula $(\text{Equivalent Power}/4)+1$. This conforms to BS EN ISO 15253: 2000.

ABOUT US

Optima Low Vision Services Ltd was established in 1994 by John Collins who has been in the field of low vision services for over 40 years. Optima is now managed by Sean Collins, John's son. Over the years, Optima has accumulated a wealth of knowledge about the needs of people with a visual impairment. John has undertaken several research programmes and presented papers at many national and international conferences. In 1988, John was awarded the 'David Scott Blackhall Award' for services to people with a visual impairment by the BBC Radio 4 InTouch programme in conjunction with the Patients Aid Association. In more recent times, Optima has been researching, developing and bringing to the market a range of low vision aids with some unique features.

With over 40 years of accumulated knowledge and experience, Optima has brought together a vast range of high quality products from around the world, including optical magnifiers, task lighting, anti-glare protection filter spectacles as well as electronic magnifiers. We have a solution and our dedicated team are passionate about low vision and are always happy to help.

PRE-PURCHASE INFORMATION

Before you purchase a magnification device of any kind it is vital that you can answer the following questions positively. Have you...

- Sought the assistance of your Optometrist and been advised that your vision cannot be improved with conventional spectacles?
- Been examined by an Ophthalmologist and advised by them that your vision cannot be improved by medical or surgical treatment?

Only after you have been able to answer these questions positively and ensuring your vision cannot be improved by the use of conventional spectacles or medical or surgical treatment should begin to consider using magnifying aids.

If in any doubt, please discuss the matter with your GP, Ophthalmologist or Optometrist before continuing.

USING THE PREDICTION CHART

We use the minimum level of magnification necessary when using visual aids because as magnification power increases, the working distance and lens size gets smaller.

The prediction chart on the next two pages will help you predict the magnification level you require in order to read standard newspaper size print. This is an estimate, as other factors such as lighting and spectacle strength may affect the level required.

- **Always wear your reading spectacles, even if you have found them of little benefit in the past**
- **Try to hold the chart at 25 centimetres (10 inches) from your eyes**
- **Starting with the largest print, N104, read down the various print sizes until you find it too difficult**

Your prediction is the recommended lens power underneath the smallest print size that you can read comfortably. For example, if the smallest you can read comfortably at 25cm is N32, you require approximately +16d (5x) magnification in order to read standard newspaper print.

Blue skies

N104 = +52d (14x)

Golden sand

N80 = +40d (11x)

Jack leaned on

N72 = +36d (10x)

the stone wall as
he gazed out to sea.

N56 = +28d (8x)

He could just see a small
yellow sailing boat in the

N40 = +20d (6x)

MAGNIFICATION PREDICTION CHART

distance. It was close hauled
because of the fresh sea breeze.

N32 = +16d (5x)

The sun warmed his back as he watched
from his vantage point on top of the tower.

N24 = +12d (4x)

Over the years Jack has spent many happy hours up on top
of this sturdy old watchtower observing wild life.

N20 = +10d (3.5x)

Jack could sense the enjoyment of the yachtsmen as they battled to sail
around the headland and reach the calmer waters of the bay.

N16 = +8d (3x)

He imagined that he could hear the sound of their cheers carried to him on the summer breeze
now that they had won the race. Jack smiled as he turned to walk down to the

N12 = +6d (2.5x)

harbour with thoughts of the cosy village inn, a roaring fire and some liquid refreshment to go with a tasty lunch.
As he entered the inn the landlord greeted him by name and reached for Jack's favourite tankard

N10 = +5d (2.25x)

without being asked to fill it with strong local cider. Jack joined old Ben the retired lighthouse keeper who was sitting in his usual place by the fire.
After a lonely life working in an isolated lighthouse Ben enjoyed the friendship of the locals he has spent a lifetime

N8 = Standard Newspaper Print

safeguarding and the comfort of his familiar surroundings. Ben's large old hands were stretched out towards the glowing flames of the open log fire. Neither Ben or Jack were the most talkative of people, the
two men just sat in contented silence enjoying each others company in the manner of old friends without needing to make unnecessary conversation,

OPTIMA DART

Optima Low Vision Services are proud to launch the Optima Dart, our new range of LED hand magnifiers.

Combining over 40 years of experience in low vision practice with the creative design team at 3FD Ltd, the Optima Dart offers several unique features. With innovative design, quality and precision, the Optima Dart's key features include:

- Crisp, clear and distortion free single aspheric lenses
- Glare free SMD LED with two brightness levels
- LED colour temperature of 5,000K, a clear white light for excellent contrast with no pink or blue hue
- Simple push button on/off switch for illumination and brightness levels. Ideal for those with dexterity issues
- Ergonomic and simple squeeze to eject battery change with tactile + and - embossed battery position guides
- Integrated lanyard connector (*lanyard available separately*)
- Micro-fibre pouch which doubles as a lens cleaner
- CE and RoHS compliant
- 2 year limited guarantee against manufacturing and material defects

2 x AA batteries included

LED ILLUMINATED HAND MAGNIFIERS

A unique feature of the Optima Dart range is that it has interchangeable lens heads and handle, this is beneficial for those who require different levels of magnification. For practitioners this can prove helpful when demonstrating.

COIL WINDSOR

Economically priced, this range of hand magnifiers have very lightweight convex lenses with a transparent frame and handle. They come in three sizes and powers and are popular with those who do not require high levels of magnification.

OPTIMA IDEAL

These economically priced magnifiers have convex lenses, lightweight handles and transparent frames.

The convex lens enables the user to see clearly through either side of the lens.

COIL HI-POWER HAND

This tried and tested range of sturdy hand held magnifiers have been one of the most popular ranges of magnifier for many years. They feature crystal clear, lightweight bi-aspheric lenses with a wide field of view. The ergonomically designed frames provide excellent balance & comfort. Comes complete with a protective pouch.

LED ILLUMINATED STAND MAGNIFIERS

COIL RAYLITE DUO

The Raylite Duo range of LED illuminated stand magnifiers use the very latest state of the art technology in both LED design and diffusion.

There is a choice of two brightness levels which can be changed easily by toggling the press button. This feature enables the user to select the level of illumination to suit their individual needs.

The specially designed diffuser ensures quality and even light over the entire viewing area.

- Easy to use press button switch is ideal for those with dexterity issues
- Long battery life span of approximately 200 hours on the lower brightness setting
- Automatic switch off after approximately 35 minutes
- Easy change battery compartment thanks to the simple ergonomically designed one piece handle

2 x C batteries included

COIL RAYLITE 2

The Raylite 2 range of LED illuminated stand magnifiers are a tried and tested range. They have the benefit of COIL's distortion free aspheric lenses coupled with a reliable high quality LED light source which spreads the light evenly over the entire viewing area.

There is a choice of nine magnification powers in the range and all heads and handles are interchangeable.

- Simple to use large tactile slide light switch
- Long battery life span thanks to the high quality LED
- Easy battery change - simply twist off to release the end cap of the handle
- Reliable long lasting design that has stood the test of time

SUPEROCLARARS

Superoocular spectacle mounted magnifiers provide clear optics with an exceptionally wide field of view. Presented in a modern, stylish metal frame, glazed to one eye with a plano lens glazed to the other.

A frosted occluder can be fitted instead of the plano lens as a special order. Alternatively, see the next page for our flexible occluders. Comes with a micro fibre pouch/cleaning cloth and a hard case.

COIL HYPEROCLARARS

Hyperoculars are magnifiers mounted in a spectacle frame. It is only practical to use one eye because of their high levels of magnification. They have a very short working distance, reading material held 2-3 cm from the lens when using the 12x.

Models with 'both eyes' are for practitioner assessment purposes only.

OCCLUDERS

OPTISHIELD FLEXIBLE OCCLUDER

Made of soft medical grade silicone, the Optishield fits neatly onto the spectacle lens allowing good coverage. Suitable for professionals conducting assessments or for individuals as a flexible option where temporary partial occlusion has been recommended by an eye care specialist. The Optishield comes in two options, black or frosted.

OPTIMA SHORT FOCUS

An excellent range of compact economic monoculars with short focus facility that focus down to 14". The focus barrel rotation and clear optics allow for bright, crisp images at any focus level. Ideal for viewing destination boards & sporting events but equally useful in short focus range. Includes case and strap.

SPECTACLE CLIP ON

This lightweight, compact acrylic clip-on monocular with short focus has a focal range from 12" to infinity achieved via a simple twisting action. Comes with a protective case.

CLOSE UP™

Ultra-compact and weighing only 50 grams, this monocular with close focus facility focuses from infinity down to just 10". Perfect for viewing nature. Includes pouch, strap and lens cloth.

SPECWELL CORPORATION

Specwell Corporation, with their perfectly clear lenses and precise mechanisms, are the world leading manufacturer of high quality roof prism, close focus, hand held monoculars. Specwell products come with a 1 year limited guarantee.

Can't find it? Please contact us as Optima can source all Specwell products.

SPECWELL MONOCULARS

SPECWELL SHORT FOCUS

These handheld, roof prism monoculars have dual purpose scopes which work well for near or distance viewing.

The focus barrel rotation system and superbly clear optics allow for bright, crisp images at any focus level. Rubber eyecups are included to assist with comfort and protection, they can be rolled down for spectacle wearers.

Specwell monoculars can be used for a range of activities including sporting events and reading destination boards. The short focus position is useful in supermarkets and shops.

WITH RUBBER HOUSING

Specwell monocular as described above with protective rubberised armour to minimise damage if dropped.

ACCESSORIES

Specwell offer a variety of accessories for their monocular range. Some of the most popular accessories are itemised in our price list. Please contact us for specific accessories.

Lightweight spectacle mounted binoculars with dual focus lenses. Ideal for intermediate and longer distances such as watching TV or at the cinema. Comes with a cloth pouch and protective outer case.

SPORTS SPECTACLES

These spectacle binoculars provide an exceptional field of view and an individual focus mechanism enables the user to focus one lens at a time. The 2.8x has a comfortable yet strong plastic frame which incorporates soft rubber eye shields for comfort and protection. The 3.5x version has a metal frame. Both powers are ideal for watching television and live events. Comes with a neck cord, case and cleaning cloth.

COMPACT BINOCULARS

SCOUT

A lightweight, precision optical instrument with an ultra compact mechanism and fully coated lenses. The Scout has a range of high magnification levels with appropriate objective lens diameters for a good field of view. A centrally positioned focusing wheel and independent right dioptre adjustment gives maximum focus flexibility. Comes with a case, neck strap and lens cloth.

TRACKER

Compact binoculars with multi coated lenses that reduce internal glare and reflection, producing crisp, bright images. They incorporate roll-down eyecups for spectacle wearers. A centrally positioned focusing wheel and independent right dioptre adjustment gives maximum focus flexibility. Comes with a case, neck strap and lens cloth.

OPERAVIEW

Ultra compact binoculars with fully coated lenses. The OperaView weighs just 50 grams and has a wide field of view. A centrally positioned focusing wheel provides maximum focus flexibility. Ideal for sporting events, the theatre, opera or concerts. Comes with a case, neck strap and lens cloth.

VIDEO MAGNIFIERS

Video magnifiers offer numerous options and significant flexibility. Adjustable levels of magnification and contrasting colours are just some of the many features these products offer. Video magnifiers come in many different sizes, from larger desktop magnifiers, to more portable options. Finding the right choice may be difficult with so many available. Here at Optima we have used our knowledge and experience to select the suppliers and products that offer the best combination of reliable, high quality, yet competitively priced products. To help you decide and ensure the magnifier is the right one for you, we offer a 14 day, free of charge, no obligation home trial service*. Please contact us for further details.

**Return postage charges apply to products not purchased at the end of a trial. Trials are subject to terms & conditions.*

Reinecker Vision is based near Frankfurt in Germany. With 50 years of experience in the low vision market they are known worldwide for producing desktop video magnifiers of the highest quality and performance.

SightCare is an industry leading high-tech company, specialising in the development and production of electronic low vision aids. Their Clover series of portable video magnifiers is an excellent choice.

Zoomax is at the forefront of video magnifier development and innovation. The first company to introduce OCR technology into a handheld video magnifier. The Luna & Snow series have excellent design and product quality.

Due to the constantly evolving video magnifier market, we have a separate booklet with the latest video magnifiers available to trial or purchase. Please contact us for a copy or visit our website to see the latest range.

ANTI GLARE SHIELDS & FILTERS

Selecting the most effective filter is a subjective process as individuals have different needs, preferences and specific requirements. Many people have more than one visual impairment, so all recommendations are offered as a guide only.

It is assumed that the darker the filter, the more effective it is at reducing glare. This is incorrect. Whilst darker lenses will reduce glare, they also reduce vision and you see less through them. Always use the lightest colour filter you can cope with.

NOIR ANTI GLARE SHIELDS & FILTERS

NoIR Medical Technologies have developed an extensive range of anti glare filters to meet the challenging needs of people with a visual impairment. Whatever your need, there is a NoIR filter and frame to meet your specific demands.

Our advice for NoIR filters is to choose the highest percentage visible light transmission (VLT) that meets your needs. All NoIR filters block UVA, UVB, UVC to 400nm. Some filters offer blue blocker (BB) protection, some block infra red (IR), whilst others offer glare protection (GL). Look for these symbols on the filter chart.

Noir products come with a limited one year warranty against manufacturer and material defects.

Recommendations:

Macular Degeneration	11	40	505	Cataracts	21	50	465
Diabetic Retinopathy	60	533	553	Glaucoma	12	21	22
Retinitis Pigmentosa	60	533	553	Photophobia	01	33	81

Every effort is made to keep popular filters & frames in stock, but less popular filter colours fitted into less popular frames may need to be specially ordered.

Can't find it? Please contact us as Optima can source all NoIR products.

SUNSAFE FILTERS

Sunsafe filters are a range of high quality blue blocking filters that protect the eyes from harmful UV and blue light whilst enhancing contrast and providing relief from glare.

When light passes through the lens of the eye, the blue part of the spectra will spread and scatter causing a loss of contrast and sharpness. The benefit of using SunSafe filters is that they will block out the disturbing parts of the blue light whilst allowing the beneficial light rays to pass through the lens unaffected.

Clinical studies have shown that the shortwave ultra violet and blue light can have a damaging effect on our vision if allowed to pass through the lens of the eye and onto the retina. The amount of damage will of course depend on the level of exposure to these light rays.

SunSafe filters will protect vision by filtering out these potentially harmful light rays. SunSafe Filters are available in modern comfortable fit over frames in two sizes, as well as a stylish non fit over frame and clip-on filters. For those who are extremely photophobic or whose hobbies include sailing, skiing, or fishing, the SunSafe range are also available with a polarised option.
